

- Multifunctional dip molded handlebar
- Height adjustable handlebar & saddle
- Braking mode: maintenance-free magnet resistance adjustment
- Stepless resistance adjustment and stepless speed changing, can simulate different types of cycling experience
- Key metal parts: 7 series aviation grade aluminum with surface treatment, featuring good corrosion resistance and high toughness without deformation
- Transport wheels for easy transportation

- User weight capacity: ≤100kg
- Unit size: 1320×520×1020mm  
Unit weight: 57kg

## Selling Points:

1. multifunctional plastic immersion handrail. Streamlined grip, soft wrap, plastic, more beautiful and comfortable (with item support to store kettle and mobile phone)
2. The height of armrest and cushion can be adjusted by quick release
3. braking mode: maintenance free magneto-resistance system, no physical friction contact, uniform resistance, smooth and silent
4. no extreme resistance adjustment, stepless speed change, arbitrary adjustment of resistance, simulating various scenes of riding
5. important metal components: 7-series aviation aluminum and surface treatment technology, with strong corrosion resistance and high toughness and not easy to deformation.
6. the rear flywheel is fully packaged in one-piece way, without any accident caused by the external leakage of the flywheel. The rear flywheel power is concentrated at the rear end of the bicycle, which is in a balanced state with the center of the human body, and the weight of the rear flywheel is more stable and the force on the bicycle is more uniform
7. upgrade the shock absorption cushion, which makes the ride more comfortable and delicate
8. the roller is designed to be easy to move.
